

## MaOS - Changelog

All notable changes to this project will be documented in this file.

Version: 1.7.2

Release type: Level 1 public prototype

Date: 2026-06-23

Status: Playable prototype

### Added:

- Level 1 game archive.
- AI-installed launch structure.
- Isolated session launch prompt.
- Character card setup flow.
- First-turn gameplay initialization.
- Quick start documentation.
- Basic play guidance for selecting actions, asking the AI consultant for advice, and using free-form input.

### Changed:

- Initial public release of the Level 1 prototype.

### Quality Assurance:

- Conducted game balance testing for the Level 1 public prototype.
- Validated the archive, including internal consistency checks and verification that the archive's internal structure matches its intended functional purpose.

### Fixed:

- No public fixes in this release.

### Known issues:

- Output may vary between AI models.
- Some AI chats may summarize the archive instead of launching the game.
- Very small or limited-context models may fail to preserve the full game structure.
- Long sessions may require occasional status summaries.

### Compatibility:

- Requires an AI chat capable of reading uploaded files.
- Recommended for models with strong instruction following and long-context handling.

### Notes:

- MaOS is designed to generate unique playthroughs. A new launch does not need to match a previous session word-for-word. Different launches may produce different descriptions, scenes, and wording. This is intentional and part of the game design.
